Montgomery County Community College
CIS 208
Implementing CISCO Cyber Operations
3-2-2

COURSE DESCRIPTION:
This course will teach a student the knowledge and skills required to build, scale, secure, and defend the networks that are used in our businesses and daily lives. Students will also focus on various types of cyber-attacks and use tools and techniques in a virtual machine environment that allows them to create, implement, monitor, and detect malicious activity. The hands-

This course is consistent with Montgomery
was developed, approved and will be delivered in full compliance with the policies and
procedures established by the College.
